

Online Collaboration

People need to collaborate despite the barriers of distance, context, technology and time. Online Collaboration is a new way of working that makes collaboration easier. GroupSense [Online Collaboration Solutions](#) provide the infrastructure and services that enhance and increase collaboration in organisations and for tertiary education providers.

Knowledge Management

Within and across organisations, Online Collaboration focuses on facilitating conversations and connections between people and knowledge that contribute to their work and learning. Communication, content and documents are organised to support people ([more...](#))

eLearning

Online Collaboration makes it possible to have the same vitality that is experienced in face to face collaborative groups without being face to face. It is ideal for post-graduate contexts, and trains participants in the skills needed in the emerging online work culture. GroupSense also offers integrated content and communication management systems ([more...](#))

eDemocracy

Online Collaboration makes it easier for citizens to participate in open conversations about shared issues. GroupSense works with Government and independent organisations to facilitate eDemocracy. ([more...](#))

Solutions

GroupSense provides complete end-to-end solutions that initiate and develop online collaboration for organisations and tertiary education providers ([more...](#))

Why Online Collaboration works

Based on fundamental principles and key concepts, Online Collaboration builds on the way people work in groups and communities where there are few or no barriers.

Project Examples

GroupSense is currently running [Online Collaboration Projects](#) in eLearning and Knowledge Management contexts.

Project Process

Online Collaboration Projects are delivered in two main phases: an establishment phase that plans and initiates the project; and a support phase that supports the ongoing development ([more...](#))
