

GroupSense Network

GroupSense works closely with a network of associated companies and individuals. This enables GroupSense to provide our customers with access to a range of specialised services without the overhead and risk of establishing and managing new relationships.

Bringing in specialised skills on a project-by-project basis enables GroupSense to choose the right person for each job. As we have no fixed staff costs in non-core areas, we have no incentive to place people on projects other than to solve our customers' problems in the most efficient and effective way.

The skills available in the GroupSense network include web design, website hosting, software development, information technology, knowledge management and PR/communications consulting.

GroupSense is a member of the [Effusion Network](#), an innovative network of companies working in the area of technology, collaboration and media. IOPEN, ZYPE, Effusion, Aphid and Seradigm are also part of the Effusion Network.

The GroupSense network includes:

- IOPEN provides open-standards based Internet solutions and is the core developer of GroupServer and the XML-based architecture underpinning this GroupSense website
- ZYPE designs for interface, usability and the web, and developed the styles sheets and XSLTs for GroupServer and this GroupSense website
- Seradigm specialises in Knowledge Management consulting and also provides strategic Information Systems consulting
- Egressive provides Information Systems platforms for small to medium sized organisations and develops web/database applications
- APHID provides open-standards oriented web database development
- Word Engineering provides strategic communications consulting and services
- Toucan House provides online and multi-media learning solutions
- Cactuslab develops and designs content-rich websites that are easily managed by their clients
